The class made me realize that there are many tools for analytical use, and of all the topics covered, the one that most aroused my interest is linear regression. I consider it an interesting and useful programming technique for several reasons: firstly, it is a simple and easy to understand algorithm, and with it we can make predictions or estimate values based on the relationship observed in the training data, its results are interpretable and efficient, so I enjoyed it very much, with the teacher the class is very interesting.
